

46. A microprocessor chip as recited in claim 45, wherein said clock mode includes a normal clock mode and at least one reduced power clock modes.

C1  
could.

47. A microprocessor chip as recited in claim 39,  
wherein said microprocessor supports a plurality of reduced power modes, and  
wherein over heating of said microprocessor chip is averted by reducing the  
frequency of the clock signal chip to a value associated with one of the reduced power  
modes.

### REMARKS

This Amendment adds new claims 38-47 to the Application. Examination of these additional claims is respectfully requested. Claims 25, 18 and 31 are also canceled from the Application.

Respectfully submitted,

C. Douglass Thomas
